

2229 Main Street Oversight Committee

Monday March 7, 2016, Meeting Agenda

7:30 pm meeting begins

Review old minutes

Paul will give us an update on progress setting up test wells and gathering data for the remediation design of the 1,4 dioxane cleanup, including a discussion about water treatment and disposal.

Review EPA progress negotiating for the NTCRA for the groundwater remediation (likely), and the complete site remediation (not so likely).

Discuss the Record of Decision and the remediation design phase of the project:

<http://semspub.epa.gov/src/document/01/582996>

The ROD is purposely vague about the structure that will contain the apatite treated holding basin, so that materials can be selected as part of the remediation design (ie Bentonite, or traditional concrete?) The committee will discuss ways that we can become more informed about these options. (TAG grants? People in our community who can give us advice? etc.)

Make a list of issues to discuss at the next EPA technical group meeting.

Adjourn meeting by 9:30pm

-Pam Rockwell

2016 meetings scheduled at 7:30pm in the 1st Floor Meeting Room, 141 Keyes Road: May 3, (Monday) June 6, July 5, August 2, September 6, (Monday) October 3, November 1, December 6
